

Motorized Turning Spindle Selection Manual

Motorized Turning Spindle

FEATURE

1. It is driven by a permanent magnet synchronous built-in motor, which has a small size and high power density.
2. The bearing adopts pre tensioning method mainly adopts positioning pre tensioning. Positioning pre tensioning can achieve high rigidity and high torque requirements.
3. Dynamically balanced to G1.
4. Little noise and thermal deformation
5. High dynamic rotational accuracy
6. Equipped with a built-in locking mechanism, it can achieve high torque locking without changing the accuracy during locking.
